Orders-

Our store is open MON-FRI 10 am to 7 pm and Saturday 10 am to 5 pm to take your orders. We accept major credit cards. If you like, you may use the enclosed order form and mail it to us. The safest way to send money is personal check, money order or cashiers check. Ohio Residents please include sales tax (6.75%) on non-food items. First time orders with personal checks may delayed while your check clears. We ship by UPS, Fed Ex and United States Postal Service.

To calculate shipping charges, total the amount of weight for your order. Shipping weights are found next to the item codes. Please note any decimal points. For example, item GR80-1.1 lb) ships for 2 lbs. Next find your shipping zone. Locate the first three digits of your zip code on page 36. Follow across to the right to find your shipping zone. Next, look at the weight and cost chart on the same page and match the weight of your order and the zone to which it will be shipped. This will give you your shipping charge. Please add this charge on your order form in the box labeled UPS shipping charge. NOTE: Packages that are fractions of a pound take the next highest shipping weight (e.g. if the total weight of the package is 14.1 pounds, the shipping weight is 15 pounds).

Classes-

We offer a variety of classes on beer, wine, and winemaking. For beer we offer a Beginner / Intermediate class and an All-grain advanced class. Each class lasts two hours and includes hand-outs and a demonstration.

Quick Service-

Your satisfaction is very important to us! Under normal circumstances your order will be shipped within 24 to 48 hours of receiving it. We use recycled boxes and packing material whenever possible. We strive for SPEEDY AND ACCURATE DELIVERY!

Pricing-

We attempt to keep our prices as competitive as possible without jeopardizing our quick service, large selection, fresh products and accurate information. Due to forces that are beyond our control, PRICING AND SHIPPING CHARGES MAY CHANGE WITHOUT NOTICE.

New prices will go into effect on January 10th, 2020.

Before You Begin-

If you are a beginning homebrewer, wine-maker or cheese maker, we believe that you should read an informative book. The price of a good book will more than offset the cost, disappointment and panic that you may experience from failed attempts. For wine making, we recommend 'Enjoy Home Wine Making' (Frishman), 'The Art of Making Wine' (Anderson and Hull) and especially 'The Home Winemakers Companion' (Spiaziano). For home brewing, we recommend 'Home Beer Making' (Moore) 'The New Complete Joy of Home Brewing' (Papazian). For cheesemaking, we recommend 'Home Cheesemaking'. WE ALSO HAVE MANY VIDEOS ON OUR WEBSITE AND ON YOUTUBE. PLEASE FIND OUR CHANNEL AT 'THEGRAPE99'

Canned Beer Kits

Beer ‘Kits’ include a can of hopped malt extract and a pack of yeast. For some kits we make recommendations for improvement. Using more than 20% table or corn sugar leads to cidery flavors.

We recommend using brewers corn syrup, rice syrup or dried malt extract in place of sugar and choosing a fresh pack of yeast over what is supplied with the kit.

There are some benefits to boiling kits so we recommend a short boil (5-10 min). Excessive boiling can caramelize the wort and darken the beer.

**Cryo Hop Pellets:**

Cryo Hops are the concentrated lupulin of whole-leaf hops containing resins and aromatic oils. They are designed to provide intense hop flavor and aroma, enabling brewers to dose large quantities of hops without introducing astrignent flavors or vegetative material. Juicy and resinous flavors are extracted with reduced grassiness.

To ensure preservation of the essential oils and resins, the production process is conducted at cool temperatures, 30 degrees lower than regular hop pellet production.

Creating new recipes with LupuLN2 is an excellent (and safe) way to showcase hops in innovative beers and styles. As a starting point for recipe formulation or modification, the estimated dosing rate of CRYO HOPS is 40-50% of hop pellets by weight.

Diastatic power is 54 degrees lntner and total protein is 10.1%. Use this malt as the base malt for bitters, pale ales, IPAs, porters, stouts, Scottish ales, barley wines and other similar styles.

CHOCOLATE MALT: Color is 338 degrees Lovibond. Chocolate malt can impart a warm toasted, nutty, chocolate flavor and also color depending upon the amount used. Try using 2 oz per 5 gallons to impart a red color in ales and lagers. Add 4 oz or more to brown ales, porters and stouts. Also use in dark lagers.

BRITISH CRYSTAL MALT: Color is 60 degrees Lovibond. This crystal provides color, unique flavor, body, head retention and foam stability. It also imparts a sweet, caramel flavor and a orange to light red color. For light amber beers, use 3-7% to provide color, sweetness, flavor and body. For a medium amber beer, try 5-15% of the grist.

MALTING CO. OF IRELAND (MCI)

STOUT MALT: This is a light-colored base malt produced from Propino barley. It's characterized by plump kernels with very low protein and high extract. The kilning temperature is kept low (82-84°C) resulting in a lighter wort with higher enzyme levels.

DINGEMANS MALTING

Dingemans Pilsner (1.4-1.8° L): Light in color and low in protein. Dingemans Pilsner is produced from the finest European two row barley. This malt is well modified and can easily be mashed with a single-temperature infusion.

Dingemans Pale Ale (2.7-3.8° L): Fully modified and is easily converted by a single-temperature mash. This is the preferred malt for ales of all types. This malt is interchangeable with British pale ale malt.

Dingemans Munich (4-7° L): Undergoes higher kilning than pale malt. The resulting malt will lend a full, malty flavor and aroma, and an orange-amber color. This malt can make up to 100 percent of the grain bill, but low diastatic power makes this malt unsuitable for use with adjuncts.

Dingemans Special B (140-155° L): The darkest of the Belgian crystal malts. Dingemans Special B, aka Cara 400, will impart a heavy caramel taste and is often credited with the raisin-like flavors of some Belgian Abbey ales. Larger percentages (greater than 5 percent) will contribute a dark brown-black color and fuller body.

Dingemans Biscuit (18-27° L): This toasted malt will provide a warm bread or biscuit flavor and aroma and will lend a garnet-brown color. Use 5-15 percent maximum. No enzymes. Must be mashed with malts having surplus diastatic power.

Dingemans Chocolate (320-350° L): Aka Mout Roost 900, is a high-nitrogen malt that is roasted at temperatures up to 450°F and then rapidly cooled when the desired color is achieved. "Chocolate" refers primarily to the malt's color, not its flavor. This malt will lend various levels of aroma, a deep red color and a nutty/roasted taste depending on the amount used.

Dingemans Aromatic (17-21° L): Aka Amber 50, is a mildly kilned malt that will add a strong malt aroma and deep color when used as a specialty malt. This malt can make up to 100 percent of the grain bill, but it is fairly low in surplus diastatic enzymes.

Dingemans Cara 20 (CaraVienne) (19-27° L): Is a light crystal malt used by Belgian breweries in producing Abbey or Trappist style ales, and is appropriate for any recipe that calls for crystal malt. Not synonymous with Vienna malt.

BRIESS MALTING

MUNICH MALT: -10 degrees Lovibond (+/- 2 degrees), Diastatic power (50 lintner), 12.5-13.5% total protein, munich malt provides a modest color increase toward the golden to orange hues. It also adds a toasted malt flavor without adding non-fermentable. For bock or dark beers use 10-20% of the grist. For amber or Marzen beers, try 5-15% of the grist. For Canadian or Pale ales, try 3-7% of recipe.

ROAST BARLEY: Lovibond is 300 degrees +/-25. It imparts a sweet, gravy coffee-like flavor and a red to deep brown color to beer. The flavor is concentrated, so little goes a long way. Chocolate malt, black patent malt and black barley are often used in combination with roast barley to obtain the desired color. Color contribution is red to deep brown depending upon amount used. For porters and stouts, try 3-7% of grist for a coffee like flavor. For nut brown ales, try 2-5% of total grist.

SPECIAL ROAST: - 50 degrees Lovibond. Imparts a deep orange color and a roast biscuit flavor to dark and brown ales and contributes a 'biscuit' flavor to beer. It is used quite often in English ales. For Nutbrown ales, use 5-10% of grist (about one pound in an extract batch), 2-5% of grist for dark ales and 5-10% of grist for porters.

VIENNA MALT: Lovibond is 3.5 degrees, and diastatic power is 130 degrees Lintner. Total protein is 12.5-13.5%. This Vienna malt can be used in place of the standard pale malt as the base malt in a recipe. It imparts a more malty, grainy flavor and a slightly deeper golden color than the standard base malt. The enzyme content allows the use of specialty grains and adjuncts. To add additional malty flavor to a recipe, try adding 10-30% of grist (or 1 lb in extract recipes). For amber all grain brews, try using 60-90% of this Vienna along with some crystal malt.

WHEAT MALT: Color is 2.0 degrees Lovibond and diastatic power is 155. Wheat malt is used most often in German styled Weizenbier, German Weiss, and Belgian Witbier. Wheat which has been malted gives a malty flavor which can not be obtained by unmalted wheat. Malted wheat also improves head formation and head retention. Use 51-75% wheat in German Hefe Weizen. It can not be obtained by unmalted wheat. Malted wheat also improves head formation and head retention. Use 51-75% wheat in German Hefe Weizen.

CRYSTAL MALT: 80 degree Lovibond crystal adds color, unique flavor, body (non-fermentables), and aids in head retention and foam stability. It imparts a very pronounced sharp caramel flavor and a deep red color. For dark beers, use 3-15% to provide color, caramel flavor and body. For porters and stouts, try 10-15% of recipe.

BREWERS MALT - 2 Row: Klages, Harrington 1.8 degrees lovibond, diastatic power (140 lintner), total protein 12-12.5%. Yields a slightly higher extract than 6 row brewers malt. 2 row imparts a smoother, less roasted character than 6 row. Use as a base malt for many beer styles especially American ales and lagers.

PALE ALE MALT - 2 Row: 3.1 degrees Lovibond, Diastatic power (81 lintner), total protein 11.5-12.0%. An inexpensive alternative to English Pale Ale malt.

RAHR 6 ROW: A light-colored base malt made from a blend of American 6-Row barley varieties. 6-row barley has a higher protein content and enzymatic power than 2-row barley.

CRYSTAL MALT: 120 degree Lovibond crystal adds color, unique flavor, body (non-fermentables), and aids in head retention and foam stability. It imparts a very pronounced sharp caramel flavor and a deep red color. For dark beers, use 3-15% to provide color, caramel flavor and body. For porters and stouts, try 10-15% of recipe.

CARAPILS (Dextrine) MALT: Adds body (mouth feel), head retention, foam stability without effecting the color of the finished beer. Can be used with or without other specialty grains. Use 5-20% of grist for light colored beers and 2-10% in dark beers to obtain the above desired effects.

BREWERS MALT- 2 Row: Klages, Harrington 1.8 degrees lovibond, diastatic power (140 lintner), total protein 12-12.5%. Yields a slightly higher extract than 6 row brewers malt. 2 row imparts a smoother, less roasted character than 6 row. Use as a base malt for many beer styles especially American ales and lagers.

Pale Ale Malt - 2 Row: 3.1 degrees Lovibond, Diastatic power (81 lintner), total protein 11.5-12.0%. An inexpensive alternative to English Pale Ale malt.

Rahr 6 Row: A light-colored base malt made from a blend of American 6-Row barley varieties. 6-row barley has a higher protein content and enzymatic power than 2-row barley.
**DURST MALTING**

An authentic German malt producer located in the fatherland of beer, Durst operates its modern technological facility with a family ethos. Durst began as a family-owned country brewery and malthouse 170 years ago. All of the raw materials used by Durst are harvested from Germany's traditional barley growing regions: Baden-Württemberg, North Bavaria, South Hesse, and the Rhine Valley. All barley supplied to Durst is also cleaned in modern steeping tanks for up to 48 hours in water extracted from Durst’s own well.

**VIENNA MALT** This German Vienna malt is 2-3 degrees Lovibond and 11% protein. Extract is 80.5%. Use in any beer where a toasted malt flavor and aroma is desired (especially Viennese style lagers). Vienna malt is not toasted to as great a degree as Munich and will not impart as much toasted aroma/flavor.

**DARK MUNICH MALT** This German Munich malt is 15 degrees Lovibond and 11% protein. Extract is 81%. Use in any beer where a more pronounced toasted malt flavor and aroma is desired (especially Munich Dunkel, Marzen/Oktoberfest and Bock beers).

**WEYERMANN BOHEMIAN MUNICH FLOOR MALTED**

Floor-Malted Bohemian Dark malt is a kilned, Munich-style specialty malt. Part of Weyermann’s line of Heirloom malts, Floor-Malted Bohemian Dark malt boasts both historical authenticity and superb quality. Bohemian-grown Tolar and Bojos spring barley varieties are expertly floor malted in Weyermann’s traditional facility in the Czech Republic.

Floor malting gives the malt an earthy, satisfying aroma and intense, malty flavor. Kilning adds a toasty, biscuit aroma to the malt. High proportions of floor-malted grain provide a smooth mouth feel. Floor-Malted Bohemian Dark malt is perfect for historical brews, especially Bohemian dunkel lagers.

**CARAFOAM-** (Carapils): 1.7-2.4 deg L. Great for use in pilsners and lagers, alcohol-reduced beer, light beer and bock beer. Use 3-5% of grist or up to 40%. Imparts improved head retention and fuller body.

**MELANOIDIN:** 23-31 deg L. Great for amber lager, dark lager, scottish ale, amber ale, red ale, Munich “Salvator”. Rate is up to 20% of grist. Imparts improved flavor stability, fullness and rounding of the beer color. Increases red color of beer.

**CARAFOAM II Dehusked Chocolate:** 375-450 deg L. Great for dark beer, “Salvator” color of beer. Improved flavor stability, fullness and rounding of the beer color. Increases redness of the beer.

**Rice Hulls:** Used to enhance mash filter bed. Use when large amounts of flaked adjuncts or wheat malt is being mashed.

**Carob:** A crusty alternative to chocolate malt and adds a silky smoothness. Use ¼-1 lb per 5 gallons.

**FLAKED ADJUNCTS- 1 lb Bag and Bulk Bag**

**FLAKED BARLEY:** Flaked barley adds body and head retention to beer. Used often in stouts or as chit malt in German lagers.

**FLAKED MAIZE:** Lightens body, color and flavor of beer but maintains alcohol content. Use in American and Canadian beers as 5-40% of the grist.

**FLAKED OATS:** Used in some Belgian ales and also in stouts to add a silky smoothness. Use 1-4 lb per 5 gallons.

**FLAKED RYE:** Used in Roggen beers and other ales. Imparts a dry, crisp austere flavor to light colored ales. Try using 1/4-1 lb per 5 gallons.

**RICE HULLS:** Used to enhance mash filter bed. Use when large amounts of flaked adjuncts or wheat malt is being mashed.

**TORRIFIED WHEAT:** Used to improve body and head retention in most any beer, use in small quantities (1/4 lb per 5 gallon batch).  "22.49 $ 28.99/25 lb"
**Dried Malt Extract (DME)**

Using dried malt extract in place of sugar is a good way to add body and flavor and avoid dry, thin, cidery flavors. When adding DME to a beer kit, add additional bittering hops and do a 10-20 minute boil. This will insure that there is enough hop bitterness to balance out the extra unhopped DME that is added (add 1-2 HBU’s per pound of additional dry malt added).

**MUNTONS DRIED MALT EXTRACT- (U.K.)**

100% barley malt extract. A high quality dried malt extract from the UK. A great choice in British style ales, stouts, porters, etc...

Liquid Yeast

**California Ale (WLP001):** This yeast is famous for its clean flavors, balance and ability to be used in almost any style ale. Extremely versatile. Attenuation: 73-80%; Flocculation: High. (68º - 73º F)

**English Ale (WLP002):** A classic ESB strain from one of England’s largest independent breweries. This yeast is best suited for English style ales. This yeast will leave a beer very clear, and will leave some residual sweetness. Attenuation: 63-70; Flocculation: Very High. (65º - 68º F)

**Irish Ale (WLP004):** This is the yeast from one of the oldest stout producing breweries in the world. It produces a slight hint of diacetyl, balanced by a light fruitiness and slight dry crispness. Great for Irish ales, stouts, and porters browns, reds and a very interesting pale ale. Attenuation: 69-74; Flocculation: medium to high. (65º-68º F)

**Dry English Ale (WLP007):** Clean, flocculant, and highly attenuative. Similar to WLP002 in flavor profile, but is 10% more attenuative. 80% attenuation will be reached even with 10% ABV beers. Attenuation: 70-80; Flocculation: High. (65º-70º F)

**British Ale (WLP005):** This yeast is a little more attenuative than WLP002. Like most English strains, this yeast produces malty beers. Excellent for all English styles including bitter, pale ale, porter and brown ale. Flocculation: High, attenuation: 67-74%. (65º - 70º F)

**Kolsch (WLP029):** From a small brewpub in Cologne, Germany, this yeast works great in Kolsch and Alt style beers. The slight sulfur produced during fermentation will disappear with age. Flocculation: medium, attenuation: 72-78%. (65º - 69º F)

**Super High Gravity (WLP099):** Can ferment up to 25% alcohol. Produces ester character that increases with increasing gravity. Malt character dominates at lower gravity. Flocculation: medium, attenuation: >80%. (65º - 69º deg. F)

**Hefeweizen Ale (WLP300):** Use in the production of traditional, authentic wheat beers. It produces the banana and clove nose traditionally associated with German wheat beers. Attenuation: 72-76%; Flocculation: Low. (68º - 72º F)

**Hefeweizen IV (WLP280):** Large clove and phenolic aroma and flavor, with minimal banana. Refreshing citrus and apricot notes. Flocculation: low, attenuation: 73-80%. (66º - 70º F)

**Belgian Wit (WLP400):** Slightly phenolic and tart, this is the original yeast used to produce Wit in Belgium. Flocculation: low-medium, attenuation: 74-78%. (67º - 74º F)

**Abbey Ale (WLP530):** Produces the distinctive fruitiness and plum characteristics. Excellent yeast for high gravity beers, Belgian ales, dubbels and tripels. Attenuation is 75-80%; Flocculation: med to high. (66º - 72º F)

**German Lager (WLP830):** This yeast is one of the most widely used lager yeasts in the world. Very malty and clean, great for all German lagers, pilsner, oktoberfest, and marzen. Attenuation: 74-79; Flocculation: Medium. (50º - 55º F)

**German Bock (WLP833):** Produces a beer that is well balanced between malt and hop character. The excellent dry malt profile makes it well suited for Bocks, Dopplebocks, and Ofest style beers. Flocculation: medium, attenuation: 70%-76%. (48º - 55º F)

**Irish Ale (WLP004):** Notorious yeast of European origin with unique ferment and flavor characteristics. Distinct fruit ester and high flocculation provide a malty complex profile, which cleans well. Thoroughly diacetyl rest is recommended after fermentation is complete. Flocculation: high, apparent attenuation: 68-72%. (64º - 75º F)

**1084 Irish: Slight residual diacetyl and fruitiness; great for stouts. Clean, smooth, soft and full-bodied. Medium flocculation. Apparent attenuation: 71-75%. (62º - 72º F)

**1098 British: From Whitbread. Ferments dry and crisp, slightly tart, fruity. Ferments well down to 65º F. Medium flocculation. Apparent attenuation: 73-75%. (64º - 72º F)

**1099 Whitbread: A mildly malty and slightly fruity ferment profile, not as tart as 1098 and much more flocculant. Clears well without filtration. Flocculation: high, apparent attenuation: 68-72%. (64º - 75º F)

**1187 Ringwood Ale:** Notorious yeast of traditional, authentic wheat beers. It produces the distinctive banana and clove nose traditionally associated with German wheat beers. Attenuation: 72-76%. (58º - 68º F)

**1272 All American Ale:** Fruitier and more flocculant than 1056. Slightly nutty, soft, clean. Slightly tart finish. Good Canadian ale strain. Flocculation: high, apparent attenuation: 72-76%. (60º - 72º F)

**1275 Thames Valley:** Produces classic British bitters. Rich, complex flavor profile, clean, light malt character, low fruitiness, low esters, well balanced. Medium flocculation. Apparent attenuation: 72-76%. (62º - 72º F)

**1318 London III:** From a London brewery with great malt and hop profile. True top cropping strain, fruity, light, soft balanced palate. Finishes slightly sweet. High flocculation. Apparent attenuation: 71-75%. (64º - 74º F)

**1332 Northwest Ale:** Classic strain from the Northwest. Malty and mildly fruity. Complex. Flocculation-high, apparent attenuation 67-71%. (65º - 75º F)

**1335 British II:** Typical of British and Canadian ale fermentation profile with good flocculating and malty flavor characteristics, crisp finish, clean, fairly dry. High flocculation. Apparent attenuation: 73-76%. (63º - 76º F)

**1469 West Yorkshire Ale:** Full of chewy malt flavor and character, but finishes dry, producing famously balanced beers. Moderate nutty and stone-fruit esters.

**1388 Belgian Strong:** Robust flavor yeast with moderate to high alcohol tolerance. Fruity nose and palate, dry, tart finish. Low flocculation. Apparent attenuation: 73-77%. (65º - 75º F)

Proper Starter

Proper starter concentrated yeast works it easy to give your yeast the proper start when preparing high gravity brews, cold-pitched lagers, yeast packs nearing expiration and whenever a starter is recommended. No more measuring messy DME. No more waiting to boil and cool. Just mix one can with an equal amount of purified water in a sanitized flask to produce one liter of ready starter wort.

How To Make a Yeast Starter

A “yeast starter” is yeast added to fresh wort prior to adding it to the main batch. The purpose is to increase the yeast cell population thus shortening lag time. This can be a good way to “proof” the yeast. White Labs recommends making a yeast starter “if the gravity is over 1.070, if the yeast is past its “best before” date, or if a faster start is desired”.

Procedure:

Make up a 1-2 pint wort, gravity ~1.040, hopped as normal. Boil for 30 minutes, cool to room temp. Pitch one vial, shake well and let sit for 1-2 days. Little to no activity will be seen in the starter, since this is a very small volume compared to the quantity of yeast pitched. The yeast in a starter may be done within a couple of hours. Layers of yeast should be at the bottom after 1-2 days. The wort on top of the yeast can be either decanted or left in and pitched with the main batch. Most brewers pitch the entire volume.

Typical Starter Volumes for 5 gallons:
To activate the yeast: 1 pint
To regenerate expired yeast (there will be living yeast in the package for ~1 year): 2 pints
To brew a high gravity beer: 2 pints
To brew a lager beer, starting fermentation
50-55F: 4 pints

**FRUIT BEER TIPS**

- When making fruit beers, put fruit in the secondary, not in the boil. Boiling fruit can set the pectins, insure a haze and change the flavor.

- As long as you use proper sanitation technique you don’t have to worry about infection. Cans of fruit are aseptic right out of the can.

- Don’t be afraid that the fruit flavor is too strong. It will mellow with age.

- Using a yeast with low attenuation will help preserve the residual sweetness of the fruit (e.g. Wyeast labs 1968)

- Use 3-10 lbs of fruit per 5 gallon batch. Using three pounds per 5 gallons will impart a more subtle fruit flavor/aroma. Using 10 lbs will impart a more intense full fruit flavor/aroma.

High Density Plastic Carboys

Vinage Shop: Don’t think of High-Density Plastic Carboys as plastic – think of them as flexible glass, because they are made from a special PET plastic, which does not have all the disadvantages of other plastics.

High-Density Plastic bottles are:
1) Unbreakable and tough.
2) Taste- and odor-free.
3) Impermeable to air (oxygen).
4) Clear and colorless.
5) Incredibly light weight.

They are made from special, scientifically tested, polyethylene terephthalate (PET) copolymer plastics and their non-absorbing, non-porous surfaces are easily sanitized and do not carry over flavors from one batch of product to another. They can be drilled to accept a spigot. (see VIN100).

A NOTE ON FILTER PAD SIZE
The following should give the brewer/vintner a good idea of the uses of the various porosity of filter pads. Filter pad ‘tightness’ is measured in Microns. Most books recommend fining a wine or beer a week or so before filtering. Filtering will then progress more smoothly and fewer filter pads will be needed.

Size-Result:
Coarse (6-7 Micron)- For filtering wine where maintaining body and flavor is desired. Wine may still throw a sediment. Probably the best choice for full bodied reds and for most styles of beer.

Oak Bars will add body, flavor, aroma and complexity to many styles and varietals of wine. Especially good in Bordeaux, Rhone and Burgundy and like styles. Soak barrels for 3-7 days in water to allow wood to swell before filling with wine. Once filled, stopper barrel with a solid stopper to keep air from entering barrel. We recommend a solid rubber stopper in the barrel to keep air from entering while the wine is ageing.
Corkers

Corkers

The more that you spend on a corker, the easier it is to use. We suggest the bench corker for those vintners that cork many bottles in one session (50 or more). The single and double lever corkers are fine for corking 30 or so bottles.

Deluxe Italian Double Lever Corker (Adjustable): Probably the most popular hand corker. Does a very good job of corking with a minimal amount of effort. Its only quirk is a depression mark it leaves in the top of the cork. Also requires a bit of balancing on top of the bottle. Works well with Oeneo and Micro Particle corks. Tends to deform the softer polymer corks.

Adding a pound or two of honey to a batch of beer is a great way to increase the alcohol content of a beer and possibly add some flavor, aroma and smoothness without adding any ciders flavors to your beer. If you wish to just add alcohol content, boil the honey with your malt for the entire boil. If you wish to retain some of the flavor and aroma of the honey, add the honey to the kettle 5-10 minutes before the end of the boil.

Mead can also be made from these honeys. Clover will give a very lightly flavored mead. Orange blossom will impart a more fragrant-citrus flavor to the mead. For more info, see “The Complete Meadmaker (Schramm)” and the chapter on mead making in the “New Complete Joy of Home Brewing”.

**Local Raw Honey: Clover Blend**
1 lb Jar- HY11 (2lb) .........................$7.79

**Mead Recipe (5 Gallon)**
12 to 15 lbs honey
4 teaspoons acid blend
2.5 tsp yeast energizer
2 packs Champagne yeast

Boil honey, acid blend and yeast extract in 2 gallons of water for 10 minutes. Skim any foam off the surface. Cool and transfer to fermenter. Top up with cool water to 5 gallons. Add yeast and ferment. Rack to secondary in 2 weeks and bottle when clear.

1) Add a balanced yeast nutrient (such as Wyeast nutrient) and di-ammonium phosphate. Adding the yeast nutrient prior to fermentation and the di-ammonium phosphate over the first half of the fermentation is best.
2) Add a small amount of sodium or potassium carbonate before the 12th hour of fermentation.
3) Leave the airlock off the primary and agitate the must several times for the first 24-36 hours of fermentation. After the first 24-36 hours, attach the airlock.
4) Stir the must vigorously at the beginning of fermentation and as the fermentation comes to a close. This will help insure that the yeast stay in suspension long enough to finish out the fermentation.

**Variable Capacity Wine Tanks**

These tanks allow the vintner to ferment various volumes of wine without concern for head space. Each tank includes a variable capacity floating lid, bladder, pump, spigot and air-lock. These tanks can be used for fermentation, bulk storage and dispensing.

When using for primary, open ferment or cover with plastic sheeting or lid. After pressing, collect juice and transfer to tank. Then, place lid in tank at level of wine and inflate bladder lid with pump (included).

Wine will age gracefully without worry of oxidation. For longer term storage, the air-lock can be swapped out for a solid rubber stopper. Various tank parts are available.

Cheese Making

Cheesemaking is a fun and rewarding hobby! Many people have most of the needed equipment in their kitchen. Most styles of cheese require a 2 gallon or larger stock pot or double boiler, a thermometer, a slotted spoon and cheesecloth or straining bag. If one wishes to make hard cheeses (e.g. Parmesan, Colby, Cheddar etc...) a cheese press will be needed. Most recipes require RENNET. If the milk you are using is homogenized you may also need liquid CALCIUM CHLORIDE. In addition, most recipes will call for a mesophilic or thermophilic direct set culture, citric acid, cheese salt (non-iodized flaked salt) and of course milk. A book is a great place to start. The following books contain many recipes and step-by-step instructions.

**Green Coffee Beans**

**Roasting Instructions:**
Preheat gas oven to 500 deg. F. Place about 1/2 lb of beans on a thick bottomed baking sheet (perforated is best) in a single layer. Bake for approximately 5 minutes or until a cracking noise is heard (first crack). Then, begin checking roasting progress every minute. When beans have reached your desired level of roast (5-10 minutes total roasting time), carefully remove beans from oven and transfer to a cool baking sheet. Refrigerate for 5-10 minutes or until beans are cool. Once cool, transfer to a colander and stir to remove chaff. Then place roasted beans in a glass jar and seal until ready to brew coffee. Beans will be at their best from 1 day to 3 weeks after roasting.

**Indian Monsoon:**
Annual monsoon winds cause the beans expand in size and acquire their unique, mellow flavor.
