**G & G Beer Brewing Kit**  
MALT EXTRACT- WITH GRAIN STEEPING

**GG24**  
PORTER- ROBUST- G & G

**Ingredients**

**Dry Malt Extract #1**  
**Dry Malt Extract #2**  
**Specialty Grains #3**  
**Bittering Hops #4**  
**Flavor Hops #5**  
**Aroma Hops #6**  
**Priming Sugar #7**  
**Irish Moss**  
**Sock for Steeping**  
**Yeast**

**Equipment**

**S.Steel or enamel canning pot**  
**Primary fermenter w/ lid**  
**Airlock and stopper**  
**Siphon equipment**  
**Hydrometer/thermometer**  
**Sanitizer**  
**Caps**  
**Capper**

**Recipe Specifics**

batch size- 5 us gallons  
total grain- lbs 1.75  
anticipated SG 1.058  
anticipated color SRM- 32  
anticipated IBU- 37  
boil time- 45 minutes

**Process Specifics**

grain steeping temperature- 150-160 deg f.  
recommended Yeast strain- wyeast 1028  
fermentation temperature- 60-75 deg f.  
primary fermentation time- 3-5 days  
secondary fermentation time- 5-7 days  
carbonation- 5 oz dextrose  
ideal conditioning time- 4-6 weeks

For a list of instruction sheets for grape and granary kits, visit <http://www.grapeandgranary.com/ggrec.htm>

1) Sanitize primary fermenter, lid, airlock (preferably using one-step or iodine sanitizer)

2) Pour approximately 2 gallon dechlorinated water into your boiling kettle. Bring water to 150-160 degrees F. Place specialty grains (#3) in steeping socks and place socks in water. Allow grains to steep for 20 minutes at 150-160 deg. F. Stir well repeatedly throughout the 20 minutes to allow for maximum extraction of color, flavor and aroma. After 20 minutes remove the socks. Add an additional 1-2 gallons of water to kettle and bring to a boil.

3) Turn off heat. Add all dry malt (#1 and #2) and bittering hops (#4). Stir well so that ingredients do not stick to the bottom of kettle. Hops may be put directly into kettle, straining bag not required.

4) Bring this mixture called 'wort' back up to a boil (watch for possible boil over). Allow to boil at a good rolling boil for 45 minutes. Control heat during boil so boil-over does not occur.

15 minutes before the end of the 45 minute boil add flavor hops (#5) and Irish Moss (whirlfloc tablet) into the boiling wort. Two minutes before the end of the 45 minute boil add aroma hops (#6).

5) After 45 minute boil, turn off heat. Place kettle into a sink of cold water. Circulate cold water around the outside of the pot for 15-20 minutes. Cool the wort to 110-120 degrees Fahrenheit.

Pour or siphon wort from boiling kettle to primary fermenter (attempt to leave most of the hop residue and any proteins behind). Add enough cold water (refrigerated with no chlorine) to the wort and bring the volume up to 5 gallons.

6) Check temperature of wort and obtain 60-75 deg F.. If necessary, place primary fermenter into a sink of cold water to achieve this temperature range.

7) Add yeast- if using liquid yeast make sure it has previously been popped and incubated or have yeast starter ready. If dry yeast is being used, rehydrate according to manufacturers instructions or sprinkle on top of wort. Check starting specific gravity with hydrometer. Fill airlock half full with water and attach to primary fermenter lid. Fermentation will commence within 24 to 72 hours.

8) When airlock stops bubbling (only bubbles 1 time per minute) check specific gravity. If doing a one stage fermentation go to step 10.

9) **RECOMMENDED STEP-** Siphon beer off yeast sediment into a 5 gallon glass jug. Do not splash. Allow beer to sit in carboy until clear usually 5-7 days. Add a fining agent if needed ( not included in this kit ).

10) Sanitize recappable beer bottles. Siphon beer from primary or secondary fermenter into priming container. Dissolve priming sugar (#7 ) in 1 cup boiling water. Add this sugar mixture to the beer in the priming/bottling

container. Stir well but do not splash.

11) Fill bottles to within one inch of the top. Cap bottles and allow to sit at 60-75 degrees F. for two weeks. The bottles may then be refrigerated. The beer may be consumed after two weeks but will continue to improve up to 2 months in the bottle. The beer will store well for a year or longer. Chill the beer to 45-55 deg. F. before drinking and decant into a clean beer glass that has the capacity to hold all of the beer in the bottle- Enjoy!

**IF YOU HAVE PROBLEMS OR QUESTIONS, PLEASE CALL 330-633-7223**

### **Robust Porter**

A substantial, malty dark ale with a complex and flavorful roasty character.

**History:** Stronger, hoppier and/or roastier version of porter designed as either a historical throwback or an American interpretation of the style. Traditional versions will have a more subtle hop character (often English), while modern versions may be considerably more aggressive.

**Comments:** Porter can be distinguished from from Stout as porter lacks a strong roasted barley character. It differs from a brown porter in that a black patent or roasted grain character is usually present, and it can be stronger in alcohol.

**Ingredients:** May contain several malts, prominently dark roasted malts and grains, which often include black patent malt (chocolate malt and/or roasted barley) may also be used in some versions). Hops are used for bittering, flavor and/or aroma, and are frequently UK or US varieties. Water with moderate to high carbonate hardness is typical. Ale yeast can either be clean US versions or characterful English varieties.
